

Dear Stephanie

I visited the Bizzone expo in Greenlane, Auckland today and was thrilled to see a number of businesses who have made the commitment to using environmentally friendly products. I was handed a plastic glass of orange juice on one stand and they proudly told me it was fully biodegradable... will have to do some research on those. I came away with a fair bit of reading material, and enjoyed the positive atmosphere.

May Product Special

As the weather is getting colder a number of creepy crawlies are on the move to find warmer homes. Cockroaches seem to be finding all sorts of nooks and crannies to crawl into.

I have just introduced into our range the Airomist Pest Control dispensers and sprays and am offering an introductory special.

Airomist dispensers can be set to spray 24 hours, daytime only or reduced output for night time. This product is biodegradable and safe around food, children and pets. Almost all parts of the dispenser and packaging are recyclable.

Dispenser and refill (5000 sprays) usually \$39.50 May special **\$36.50** + GST [BUY NOW](#)

Interesting fact!

Cockroaches were in existence for millions of years before dinosaurs and have changed very little over the years.

Unusual video!

Have you ever wondered if elephants are really afraid of mice? Well - Myth Busters have put them to the test with some interesting results (If you don't have time to watch the intro - fast forward to just before half way).http://www.youtube.com/watch?v=WpTSA_25wGE&feature=related

Have a fabulous June!
